The Ladder Safety Strap (LSS-150) was designed to stabilize a ladder that is leaning against a secure pole or tree trunk. Minimizes bounce & spring as the ladder is being climbed.

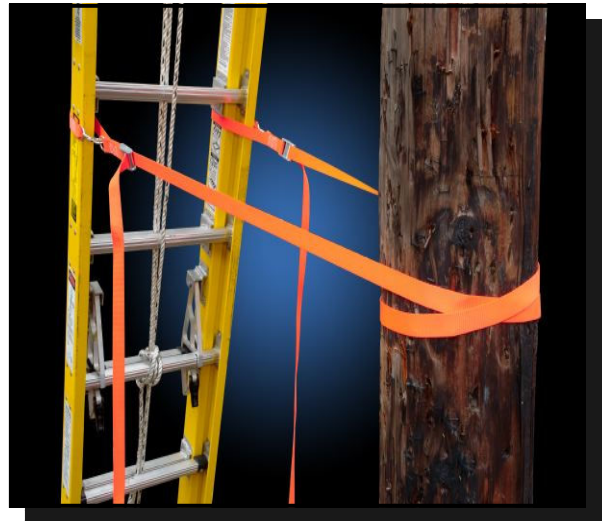

The Ladder Safety Strap will prevent ladders from:

- Kicking out
- Sliding down
- Blowing over in wind

The Webbing:

- Has a 4,100 pound breaking strength
- Is made of polyester
- Has excellent UV & abrasion resistance
- Is resistant to many chemicals.

Note: Polyester stretches less than nylon and is superior to nylon for this particular application.

The LSS-150 may be the only strap of its kind to use a heavy duty polyester thread, which has been tested on this webbing by McGill Laboratories at a 3,000 pound breaking strength.

The completed Ladder Safety Strap (23 feet in length) has been tested and is certified to be safe for loads of up to 375 pounds on a ladder with a load rating of that same amount. Note: the safety of the ladder is increased but the strength of the ladder is not.

Easy, pull through, solid zinc cam buckle

Accessory - Safety yellow, waterproof, mesh storage bag with hook / loop closure strip.
